INFORMAZIONI GENERALI**Scambiatori Acqua-Olio - Serie MG****INTRODUZIONE**

Gli scambiatori di calore acqua-olio sono impiegati per il raffreddamento di circuiti oleodinamici usando, come fluido raffreddante acqua a temperatura ambiente e sono inseriti di norma sulla linea di ritorno al serbatoio. La gamma comprende una vasta scelta di modelli caratterizzati da una elevata efficienza. La scelta di materiali di prima qualità, lavorati con macchinario di precisione, consente di ottenere un prodotto altamente affidabile. Gli scambiatori della serie MG hanno il circuito dell'acqua ispezionabile a 1, 2, 4 passaggi e possono essere forniti con valvola termostatica (vedi catalogo accessori) che consente un notevole risparmio sul consumo di acqua.

DATI TECNICI**• Fluidi compatibili**

- OLI MINERALI, HL, HLP
- EMULSIONI ACQUA-OLIO
- ACQUA-GLICOLE
- ACQUA / ACQUA INDUSTRIALE
- Per altri fluidi consultare il nostro ufficio tecnico

• Specifiche tecniche

- Versioni Standard - Acqua marina - AISI -
- Pressione d'esercizio: 12 bar
- Pressione di collaudo: 18 bar
- Temperatura max d'esercizio: 120°C
- Per particolari atmosfere aggressive consultare il nostro ufficio tecnico.

• Installazione

In figura 1 è indicata la corretta posizione di entrata / uscita dei due fluidi, che debbono circolare in controcorrente per ottenere il massimo rendimento.

Il posizionamento sulla macchina deve essere fatto con l'ausilio di appositi supporti elastici ed il collegamento al circuito oleodinamico ed alla rete idrica con tubi flessibili.

In impianti operanti in ambienti con notevole escursione termica è consigliabile prevedere l'installazione di una valvola di by-pass (vedi figura 2) fra l'ingresso e l'uscita dell'olio.

Negli impieghi che prevedono una temperatura ambiente molto bassa ($< 0^{\circ}\text{C}$), con impianto fermo sarà opportuno mantenere l'acqua in continua circolazione allo scopo di evitare rotture alle tubazioni, oppure svuotare lo scambiatore utilizzando il tappo di scarico.

GENERAL INFORMATION**Water- Oil Heat exchangers - MG Series****DESCRIPTION**

The MG Water-oil heat exchangers are normally used for cooling oil in the hydraulic systems and are installed on the return line.

The range comprises a large choice of applicable models, highly efficient.

The range of high quality materials working with precision machinery, all produce an extremely reliable product.

The MG Water-oil heat exchangers have a water system of 1, 2 or 4 circuits and they can be supplied with thermostatic valves (see accessories catalogue) which greatly assist in the reduction of water consumption.

TECHNICAL DATA**• Compatible fluids**

- MINERAL OILS, HL, HLP.
- WATER-OIL EMULSION.
- WATER-GLYCOL ACID.
- WATER / INDUSTRIAL WATER.
- Consults our Tech. Dpt. for other fluids

• Technical specifications

- Versions : Fresh water , Sea water , AISI
- Operating pressure: 12 bar.
- Test pressure: 18 bar.
- Max. operating temperature: 120°C
- For specially "aggressive" atmospheres contact our Tech. Dpt.

• Installation

The correct position of inlet / outlet of the two fluids is indicated in fig 1.

They should circulate in opposite direction, in order to obtain the maximum heat exchange.

The installation of the heat exchanger on the machine should be carried out using flexible supports and all those in connection with hydraulic or power plant, through flexible hoses.

It is advisable, to preserve the heat exchanger, that a by-pass valve is installed (see fig 2)

At very low ambient temperatures ($< 0^{\circ}\text{C}$), it is advisable to keep the water in constant circulation, to prevent harmful fractures, otherwise emptying the exchanger by use of the discharge plug.

DATI TECNICI (continua)**TECHNICAL DATA (continued)**

(fig.1)

(fig.2)

Manutenzione**Pulizia lato acqua**

È buona norma effettuare periodicamente una ispezione del circuito dell'acqua al fine di eliminare eventuali tracce di calcare o altre impurità che si siano eventualmente depositate all'interno dei tubi ed evitare così una diminuzione della efficienza termica.

Questa operazione si compie agevolmente togliendo il fondello e procedendo allo scivolamento del fascio tubiero.

Pulizia lato olio

La pulizia lato olio viene effettuata mediante flussaggio con percloroetilene fatto circolare controcorrente per circa 30 minuti.

Procedere quindi alla eliminazione dei residui tramite flussaggio con acqua calda

Maintenance**Water side cleaning**

To guarantee the maximum efficiency in exchange, an inspection of the water circuit is advisable, to eliminate all trace of lime or any other impurities, wich be deposited inside the tubes.

This operation will be easily accomplished by removing the headers and flushing out the tubes.

Oil side cleaning

Cleaning on the oil side can be done through the circulation of perchloride in the opposite direction of the normal flow for about 30 minutes.

This help to eliminate any traces of impurity by flushing out with hot water.

DATI TECNICI (continua)

• Esempio di scelta di uno scambiatore

DATI

Portata olio : 60 lt / min.
 Peso specifico : 0,88 kg / dm³
 Calore specifico : 0,49 kcal / kg°C
 Viscosità olio : 32 cst
 Temperatura olio entrata : 55 °C
 Temperatura acqua entrata : 20 °C
 Potenza da dissipare : 15 kW (20 HP)

Conoscendo la portata dell'olio, la potenza da dissipare e stabilito il ΔT , ovvero la differenza fra la temperatura di ingresso olio e la temperatura di ingresso acqua, si può ricercare sui diagrammi di ogni singolo scambiatore il modello idoneo allo scopo.

TECHNICAL DATA (continued)

• Heat exchanger selection

DATA

Oil flow : 60 lt / min.
 Specific weight : 0,88 kg / dm³
 Specific heat : 0,49 kcal / kg°C
 Oil Viscosity : 32 cst
 Inlet oil temperature : 55 °C
 Inlet water temperature : 20 °C
 Cooling power : 15 kW (20 HP)

Knowing the fluid viscosity, flow rate, cooling power and ΔT (In running difference of oil - water temperature) you can adjust these calculation in the specific exchanger diagram given in the catalogue.

TIPO TYPE	PORTATA OLIO OIL FLOW (lt/min)	HP DISPERSI CON OLIO HP DISSIPATED WITH OIL -55°C H ₂ O-20°C

Lo scambiatore selezionato risulta essere il modello MG 80-715-4.

La dissipazione indicata dal diagramma di rendimento espressa in kW (HP) è ottenuta con olio avente viscosità 32 cst e portata di acqua come indicato nella tabella A della pagina seguente.

Selected exchanger results in the model MG-80-715-4.

The marked dissipation on the exchange diagram expressed in kW (HP) will be arrived with viscosity of 32 cst and water flow as indicated in our following table A.

Poichè HANSA-TMP offre una gamma di prodotti molto estesa ed alcuni di questi vengono impiegati per più tipi di applicazioni, le informazioni riportate possono riferirsi solo a determinate situazioni.

Se nel catalogo non sono riportati tutti i dati necessari, si prega di contattare HANSA-TMP.

Al fine di poter fornire una risposta esauriente potrà rendersi necessaria la richiesta di dati specifici riguardanti l'applicazione in questione.

Questo catalogo, pur essendo stato approntato con particolare riguardo alla precisione dei dati riportati, non consiste parte di alcun contratto espresso o implicito.

HANSA-TMP si riserva il diritto di apportare qualsiasi modifica ai dati riportati.

As HANSA-TMP has a very extensive range of products and some products have a variety of applications, the information supplied may often only apply to specific situations.

If the catalogue does not supply all the information required, please contact HANSA-TMP.

In order to provide a comprehensive reply to queries we may require specific data regarding the proposed application.

Whilst every reasonable endeavour has been made to ensure accuracy, this publication cannot be considered to represent part of any contract, whether expressed or implied.

HANSA-TMP reserves the right to amend specifications at their discretion.
